(54) Title: **PLAYBACK SYSTEM WITH REMOTE CONTROL DEVICE**

(57) Abstract: In a playback system (400) comprising a meta data generating device (430) meta data information (MD) is transmitted to a remote control device (420), which remote control device (420) is provided for the remote control of a playback device (10) with the aid of selection information (AI) from the meta data information (MD). The playback device (10) and the meta data generating device (430) have a receiving device (432, 40) for receiving a data carrier, in which a data carrier (41) can be inserted, which data carrier (41) contains at least one track, each track being determined by start position information. The meta data generating device (430) is provided for generating meta data information (MD) which additionally contains the start position information. In the remote control device (420) is included selection information generating means (425) for generating selection information (AI) which contains start position information. The playback device (10) includes a processing means (51, 60) for processing selection information (AI) which contains start position information, a selection of a track being enabled by means of the selection information (Ai).

A. CLASSIFICATION OF SUBJECT MATTER
IPC 7 G11B27/00 G11B27/34

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC 7 G11B

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, WPI Data
